Detroit, MI 48201

Alex J. Etkin Specialty Center – Southfield
29120 Franklin Rd., Southfield, MI 48034

Pediatric Care

Allergy, Asthma, Immunology & Rheumatology

The Allergy, Asthma, Immunology and Rheumatology Division treats children and adults with allergic disorders and asthma.

This division offers evaluation and treatment for asthma and a wide range of allergies, including food allergy, environmental allergy, drug and vaccine allergy, insect sting allergy, angioedema, anaphylaxis, hives, eczema and other allergic skin conditions. Advanced treatment plans are available for your specific conditions including allergen immunotherapy and monoclonal antibody treatment.

The division also performs supervised drug and food challenges in outpatient clinic settings, including early introduction of peanuts to infants who may be at high risk.

The high-risk asthma clinic offers medical and psychosocial support to children with severe and/or high-risk asthma. Research studies with an emphasis on adherence to medication and identification of stressors are available to clients and interested families with asthmatics.

Asthma and allergy physicians and asthma nurse educators see every asthmatic patient admitted to Children's Hospital of Michigan with particular emphasis on follow-up daily care, education and action planning.

The Immunology Section offers a Primary Immune Deficiency/Inborn Errors of Immunity Clinic. Primary and secondary immune deficiency disorders treated include: agammaglobulinemia, specific antibody deficiency, common variable immune deficiency, hyper IgM syndrome, chronic granulomatous disease, severe combined immune deficiency, and DiGeorge syndrome.

The division is the coordinating center for the severe combined immune deficiency screening program for the state of Michigan.

The Pediatric Rheumatology Section offers rheumatology clinic and vasculitis clinic for children and adolescents. Conditions evaluated and treated include childhood autoimmune diseases, such as juvenile idiopathic arthritis, systemic lupus erythematosus, vasculitis and juvenile dermatomyositis, and autoinflammatory disorders, such as periodic fever syndromes and autoinflammatory disorders of the bones.
